

I listen almost exclusively to XM Radio when I am in the car. It would seem imperative, and in the public's interest, to have available instant broadcasts of weather and traffic condition bulletins. It is very difficult when driving to tune into a local radio station broadcasting weather and traffic conditions and usually they do not frequently broadcast bulletins. I respectfully request that you protect my safety and the safety of thousands of satellite radio listeners by rejecting the NAB Petition 04-160.

Thank you for your consideration.
